Dear Mr. LeRoux

I would like to take this opportunity to thank BioAir, and you in particular, for your participation in making our Mount Holly project a success. The owner and engineer had no prior experience with your company and were hesitant about accepting BioAir as an alternate vendor. The time you spent preparing the most thorough shop drawing of all our vendors and meeting with the engineer, owner and his operators, quickly layed to rest any questions they had about approving your equipment for use at their plant. The fans, vessels and control panels were delivered on time and were put into operation by your field representative in a timely manner without incident.

The quality of your product was outstanding and is operating beyond the owner's requirements and expectations. This was critical due to the close proximity of houses and medical facilities. In closing, we at Allan A Myers look forward to working with BioAir to provide the odor control systems on future projects. Vendors that provide the level of service, workmanship and on site assistance that we received from BioAir are hard to find. We would be happy to be used as a reference by your firm on future projects that you are involved with.

Sincerely
Allan A Myers

Kevin J. Donohue
Project Manager
